Acknowledgements

I would like to thank my advisor, Dr. Erik H. Ervin for his guidance throughout this research and also with my professional development. I would also like to thank my co-chair Dr. David J. Parrish for his dedication to my writing. The other members of my committee also deserve thanks for their assistance during this process. Dr. A. Ozzie Abaye, Dr. Boris Chevone, and Dr. Shawn Askew all helped in significant ways.

The technicians at the Virginia Tech Turfgrass Research Center all deserve thanks for plot mowing, chemical mixing, etc. They are: Dickie Shepard and Charlie McCoy. I am also appreciative of the help from Dr. Chao Shang and Dr. Xunzhong Zhang who were of enormous assistance with fatty acid and proline determination.

Jeffrey (Big N) and Kendall Beasley not only would work side by side with me in the field, but they were also my temporary Blacksburg family—you guys rock! (Which way does water run, Jeff?). I am grateful to Roque Lemus for his friendship over the past three years and also his guidance with statistics. Also thanks to Adrienne LaBranche for her friendship (gullibility) and assistance with teaching.

I am also very appreciative to all members of my family for their love and prayers throughout this process—I’ve got the best family in the world! I would like to especially thank my parents, Dr. Vern and Jerilyn Munshaw for their
undying support, encouragement and assistance with this dissertation. Me and who can do it together, Mom?
# TABLE OF CONTENTS

Abstract.......................................................................................................................... ii

Acknowledgements........................................................................................................ iii

Table of Contents.......................................................................................................... v

List of Tables .................................................................................................................. vii

List of Figures ................................................................................................................ x

Chapter I. Review of Literature ..................................................................................... 1

Introduction .................................................................................................................. 1
Bermudagrass and Winterkill ...................................................................................... 4
Cold Hardiness Mechanisms ..................................................................................... 6
Membrane Lipid Unsaturation .................................................................................. 6
Osmoregulants and Plant Cold Hardiness .............................................................. 8
Carbohydrate Influence on Cold Hardiness .............................................................. 10
Acclimation to Winter Environments ......................................................................... 11
Bermudagrass and Cold Tolerance ......................................................................... 13
Seaweed Extract and Cold Hardiness ....................................................................... 18
Late-season Nutrition and Cold Hardiness ............................................................... 20
Nitrogen Effects .......................................................................................................... 20
Potassium Effects ........................................................................................................ 23
Iron Effects ................................................................................................................... 24
Ethylene (Ethephon) and its Relation to Cold Hardiness ........................................ 25
Literature Cited ............................................................................................................ 28

Chapter II. Influence of Late-Season Iron, Nitrogen, and Seaweed Extract on Fall Color Retention and Cold Tolerance of Four Bermudagrass Cultivars................................................................................................................................. 36

Introduction .................................................................................................................. 36
Materials and Methods ............................................................................................... 38
Plant Material, Establishment, and Experimental Design .......................................... 38
Fall Chemical Treatments ......................................................................................... 39
Fall Quality and Spring Greenup ................................................................................ 40
Controlled Freezing .................................................................................................... 41
Total Lipid Extraction and Fatty Acid Quantification .............................................. 42
HPLC Procedures ....................................................................................................... 44
Proline Determination ............................................................................................... 45
Results and Discussion .............................................................................................. 46
Chapter III Effects of Late-Season Ethephon Applications on Bermudagrass Senescence and Cold Tolerance

Introduction ............................................................................................. 88
Materials and Methods............................................................................ 89
  Plant Material, Establishment, and Experimental Design................... 89
  Fall Chemical Treatments ..................................................................... 90
  Fall Quality and Spring Greenup........................................................ 91
  Controlled Freezing ............................................................................ 91
  Total Lipid Extraction and Fatty Acid Quantification........................... 93
  HPLC Procedures .............................................................................. 94
  Proline Determination ........................................................................ 96
Results and Discussion........................................................................... 98
  Turfgrass Quality.............................................................................. 98
  Controlled Freezing.......................................................................... 103
  Fatty Acid Analysis.......................................................................... 105
  Proline Concentration ...................................................................... 107
  Spring Greenup................................................................................. 114
  Summary............................................................................................ 118
Conclusions ............................................................................................ 120
Literature Cited ....................................................................................... 122
Curriculum Vitae .......................................................................................... 124
LIST OF TABLES

Chapter II

Table 2.1. Bermudagrass cultivar sensitivity to cold temperatures .......... 39

Table 2.2. Analysis of variance for chemical treatment and cultivar effects on bermudagrass visual quality (2001 & 2002).......................... 48

Table 2.3. Year x observation date interaction for visual quality across cultivars and chemical treatments (2001 & 2002). .............................. 48

Table 2.4. Breakout of observation date x cultivar interaction for visual quality across all chemical treatments (2001 & 2002). ...................... 50

Table 2.5. Breakout of observation date x fall chemical treatment interaction for visual quality across all cultivars (2001 & 2002). .............. 52

Table 2.6. Analysis of variance for post-freeze regrowth .......................... 54

Table 2.7. Breakout of the sampling date x temperature x cultivar interaction for post-freeze regrowth of bermudagrass stolons across all chemical treatments .............................................................. 55

Table 2.8. LSD comparisons for cultivars and temperatures across all dates in Table 2.7 .............................................................................. 56

Table 2.9. Breakout of sampling date x cultivar x fall chemical treatment interaction for post-freeze regrowth of bermudagrass stolons across all temperatures ............................................................ 58

Table 2.10. LSD comparisons for cultivars and chemical treatments across all dates in Table 2.9 ................................................................. 59

Table 2.11. Summary of the absolute amounts of the four major fatty acids in total polar lipids of untreated (control) Midiron, Riviera, Tifway, and Princess at all sampling dates. .............................................. 61

Table 2.12. Analysis of variance table for fraction of linolenic acid to total polar lipids .............................................................................. 62

Table 2.13. Breakout of year x sampling date x cultivar interaction for percent linolenic acid across chemical treatments ...................................... 63
Table 2.14. Analysis of variance table for fraction of linolenic acid to total polar lipids during the second year of the study (2002-03).......................... 65

Table 2.15. Sampling date and cultivar main effects for percentage of linolenic acid to total polar lipids during the second year of the study (2002-03). .................................................................................................................. 66

Table 2.16. Analysis of variance table for proline concentration .................. 67

Table 2.17. Breakout of sampling date x chemical treatment x cultivar interaction for proline concentration in the first year of the study (2001-2002)............................................................................................................ 68

Table 2.18. Breakout of sampling date x chemical treatment x cultivar interaction for proline concentration in the second year of the study (2002-2003)............................................................................................................ 68

Table 2.19. Analysis of variance table for proline concentration during the second year of the study (2002/3)......................................................... 71

Table 2.20. Sampling date x cultivar x chemical treatment interaction for proline concentration during the second year of the study...................... 71

Table 2.21. Analysis of variance table for spring greenup ................................ 73

Table 2.22. Breakout of year x date x cultivar interaction for spring greenup......................................................................................................................... 73

Table 2.23. Breakout of year x chemical treatment interaction for spring greenup across all cultivars. ........................................................................ 75

Table 2.24. Breakout of cultivar x chemical treatment interaction for spring greenup across all observation dates and both years....................... 76

Chapter III

Table 3.1. Analysis of variance for chemical treatment, ethephon treatment, and cultivar effects on bermudagrass visual quality (2001 & 2002). ................................................................. 99

Table 3.2. Breakout of year x observation date x cultivar x ethephon treatment interaction for visual quality across all chemical treatments (2001 & 2002). ................................................................. 100

Table 3.3. LSD comparison for cultivars and ethephon treatments over all dates in Table 3.2................................................................................. 101

Table 3.5. Breakout of sampling date x cultivar x ethephon interaction for post-freeze regrowth across all temperatures ............................................. 105

Table 3.6. Analysis of variance for ratio of linolenic acid to total polar lipids in fall and winter (2001-2003). ................................................................. 106

Table 3.7. Breakout of cultivar x ethephon interaction for percent linolenic acid across fall chemical treatments. ...................................................... 107

Table 3.8. Analysis of variance for ratio of linolenic acid to total polar lipids during the second year of the study. ....................................................... 108

Table 3.9. Analysis of variance for proline concentration during fall and winter (2001-2003). ........................................................... 109

Table 3.10. Breakout of year x sampling date x cultivar x ethephon interaction for proline concentration. Data are averaged over fall chemical treatments ................................................................. 110

Table 3.11. Breakout of year x sampling date x chemical treatment x ethephon interaction for proline concentration ................................................................. 112

Table 3.12. Analysis of variance for proline concentration during the second year of the study ................................................................. 113

Table 3.13. Breakout of sampling date x cultivar x ethephon interaction for proline concentration during the second year of the study. Data are averaged across fall chemical treatments ................................................................. 114

Table 3.14. Analysis of variance for spring greenup .......................................................... 115

Table 3.15. Year x date x cultivar x ethephon interaction on spring greenup across all chemical treatments ................................................................. 116

Table 3.16. LSD comparison for cultivars and ethephon treatments over all dates in Table 3.15 ................................................................. 117
