DEDICATION

To Gramp, who taught me how to work hard and so many other things…
ACKNOWLEDGEMENTS

I would first like to thank my advisor, Dr. Purcell, for all his hard work and dedication to this project. Without his support and time sacrificed I would still be stuck in the upper cubicles of Hutcheson writing long-winded drafts. Dr. Purcell’s commitment to me as an advisee was above and beyond the call of duty, and I will forever be thankful. I would also like to thank Dr. Jones and Dr. Kenyon for their interest in my research and time taken to discuss it. Without their support I could not have grasped the underlying theories of vertical coordination, or understood how to begin thinking conceptually about a new area of research. I don’t believe I could have asked for a better committee to work with.

I would also like to thank all the faculty and staff of Agricultural and Applied Economics. Each one of those individuals created an outstanding environment in which to learn, both at the undergraduate and graduate level. Special thanks go to: Marilyn Echols for constant use of hole punch; Karen O’Connor for data, RILP publications, computer help, and bearing with a million questions of mine; Dr. Kurt Stephenson for candy at the right time, lending advice, and a great friendship; Scott Sink for teaching me about real people and real agriculture, making sure I did not study all the time, keeping me employed over the summer, and being a great friend; and Dr. Leon Geyer for constant support, as well as taking me to Australia in the summer of 2000.

Finally I must thank my family for all their support while I completed this degree. I appreciate their willingness to listen and their enthusiasm for graduate education, which was more than mine at times. And above all others I thank Krista, who put up with me while I took classes and wrote. This research truly is a combined effort thanks to her support and encouragement to get it done. I could not have completed the degree without her.
## TABLE OF CONTENTS

### Chapter 1: Introduction

- Section 1.1: Beef Industry Setting ........................................................................................... 1
- Section 1.2: Vertical Coordination in the Beef Industry ......................................................... 3
- Section 1.3: Strategic Alliances as Coordination Strategy ...................................................... 5
- Section 1.4: Problem ................................................................................................................ 7
- Section 1.5: Objectives ............................................................................................................ 9
- Section 1.6: Thesis Structure ................................................................................................... 9

### Chapter 2: Review of Literature

- Section 2.1: Introduction ....................................................................................................... 11
- Section 2.2: Vertical Coordination Theory ............................................................................ 12
  - Section 2.2.1: Vertical Coordination Theory – Transaction Cost Approach .................... 12
  - Section 2.2.2: Vertical Coordination Theory – Agency Theory Approach ...................... 17
  - Section 2.2.3: Vertical Coordination Theory – Resource-Based Approach ..................... 20
- Section 2.3: Literatures on Vertical Coordination in Agriculture ......................................... 22
- Section 2.4: Strategic Management Literatures on Alliances................................................ 26
- Section 2.5: Agricultural Economics Literature on Strategic Alliances................................ 30
- Section 2.6: Literatures on Beef Alliances ............................................................................ 33
- Section 2.7: Summary ............................................................................................................ 38

### Chapter 3: A Conceptual Framework for Beef Alliances

- Section 3.1: Introduction ....................................................................................................... 41
- Section 3.2: The Traditional Beef System .............................................................................. 41
- Section 3.3: Stage One of the Alliance Model – Economic Motivations ............................... 45
- Section 3.4: Stage Two of the Alliance Model – Governance Structure Design ................. 49
- Section 3.5: Stage Three of the Alliance Model – Design Assessment ................................. 55
- Section 3.6: Summary .......................................................................................................... 58
Chapter 4: Empirical Analysis of Alliance Design

Section 4.1: Introduction

Section 4.2: Margin Sharing and Premium Allocation

Section 4.3: Data

Section 4.4: Analysis

Section 4.4.1: Margin Sharing Analysis

Section 4.4.2: Equal Margin Sharing in Combination with Premium Allocation Analysis

Section 4.5: Margin Sharing: Results and Conclusions

Section 4.5.1: Margin Sharing: Results

Section 4.5.2: Margin Sharing: Conclusions

Section 4.6: Equal Margin Sharing in Combination with Premium Allocation: Results and Conclusions

Section 4.6.1: Equal Margin Sharing in Combination with Premium Allocation: Results

Section 4.6.2: Equal Margin Sharing in Combination with Premium Allocation: Conclusions

Section 4.7: A Note on Constant Margin Arrangements

Section 4.8: Summary

Chapter 5: Conclusions and Implications

Section 5.1: Conclusions

Section 5.2: Future Research Needs and Implications
