Figure 1 and 2. A representation of susceptible and resistant reactions by inbred lines and cultivars inoculated with isolates of *E. turcicum*. The isolates from left to right are from: Kesses (A18); Kapsoit (A32); Mutitu (A35) and Kiptabus (A10). The test plants from left to right are: Coast composite, Pwani4, A619, Pwani 4, A619, B14HtN, B73Ht1, B73Ht1 and Mzihana. The one to the extreme right is a healthy leaf on Figure 1.
