Rappahannock River Edge
Laura Celeste Weindelmayer

(Abstract)

Inherent in river is a dual nature: It is a dynamic, flooding entity which never moves but causes movement. This cord which ties the lands and towns along its edges also ties the individual town to the water. The river’s character becomes apparent through the life of the town, and the river, in this case, has a more static quality as it becomes a constant known factor in the life of a man. The dynamic of river shows forth when its character changes fast to overtake the town which grew from its edge. In this thesis, an 1800 foot site along the Rappahannock becomes the stage which responds to the actions of a river.
Acknowledgments

To my friends - thank you for your support and for talking with me about my work; I’ve learned much from all of you. Thanks for putting up with my need for great amounts of desk space.

To my committee - Pia, Bill, and Bill - thank you for your patience and instruction. You have given me much insight into architecture and have helped me define ideas I will carry with me for the rest of my life.

To my family - thank you for your unconditional love, support, and prayers, especially during the past three years. Jeremiah 29:11.

To God - thank You for the peace that passes understanding, for guidance day and night, and above all, for Jesus, the Messiah. All glory and honor belong to You.

And let the beauty of the Lord our God be upon us, And establish the work of our hands for us; Yes, establish the work of our hands. Psalm 90:17
