PERFORMANCE EVALUATION AND YIELD DETERMINATION OF A FULL-SCALE BIOLOGICAL AERATED FILTER

Scott D. Phipps

Thesis submitted to the Faculty of the Virginia Polytechnic Institute and State University In Partial fulfillment of the requirements for the degree of

Master of Science In Environmental Engineering

Nancy G. Love, Chair
Mark A. Edwards
John T. Novak

March 16, 2001 Blacksburg, Virginia

Keywords: Biological Aerated Filter, Yield, Particle Hydrolysis, Biochemical Oxygen Demand
Copyright 2001, Scott D. Phipps
ACKNOWLEDGEMENT

The author would like to acknowledge and thank the following people for their contributions and support during this research project. The author would like to recognize Infilco Degremont, Inc. and Edna Bailey Sussman Foundation for partial funding of this research project. The author would like to thank the Roanoke Water Pollution Control Facility and their personnel for their cooperation, specifically Scott Shirley, Barry Montgomery, and Carson Kelly. The author would like to thank Dr. Nancy Love for her guidance throughout this project and during required academic course work. Additionally, Dr. Mark Edwards and Dr. John Novak for their contributions and service as graduate research committee members. Julie Petruska and Jody Smiley for their assistance and support during laboratory work and sample analysis. Charles Bott for his research knowledge and laboratory contributions to this research project. Stephen Cox and Stephen Carpenter for their personal support of the author. The author would like to thank the author’s family whose encouragement provided the necessary support to complete this research project. Additionally, the author would like to acknowledge the many friends who provided contributions and support. Special thanks to Carrie Adam for her patience, understanding, and support.
# TABLE OF CONTENTS

## I. TABLE OF CONTENTS

## II. LIST OF TABLES

## III. LIST OF FIGURES

## IV. ABSTRACT

## V. MANUSCRIPT 1:

Proposed Screening Protocol for Selection of Microbial Seeding Material for Biochemical Oxygen Demand Quantification

- Abstract
- Introduction
- Materials and Methods
  - System Description
  - Seed Sources
  - Analyzed Effluent Samples
  - Analyses Performed
- Results and Discussion
  - Initial Observations
  - Screening of Potential Seeds
  - Protocol for Seed Selection
- Conclusions
- References

## VI. MANUSCRIPT 2:

Quantifying Particle Hydrolysis and Observed Yield for a Full-Scale Biological Aerated Filter

- Abstract
- Introduction
- Materials and Methods
  - Full-Scale System Description
  - Mass Balance Sample Collection
    - Influent and Effluent Samples
    - Backwash Samples
  - Bench-Scale BAF Reactor
- References
