Drawing Key

1. Light Shaft / Water Well
2. Spiral Stair
3. Double Helix Parking Deck
4. Fermentation Room / Tanks
5. Labyrinthian Heat Exchanger
6. Brewing Floor
   a. Mash Tun
   b. Lauter Tun
   c. Boil Kettle
7. Fireplace
8. Tavern
9. Fire
10. Entrance Ramp
11. Summer Solstice Marker
12. Public Restrooms
13. Bar
14. Hops Trellis
15. Terraced Seating
16. Inglenuks
17. Mechanical Room
18. Loading Dock (Road)
19. Loading Dock (River)
20. Kitchen
21. Tavern Deck
22. Concrete Caisson

Typical Subterranean Plan

Ground Level Floor Plan
Masonry is utilized in a inverted relation to its capacity. Will it continue to impart thermal properties which are still desired?

Non-bearing brick is free to be stacked in any configuration you please. Must only support its own weight and be held in such a way as to not fall over. Rainscreen - lighscreen filter subtle shifts in coursing expression of method transformative character.

extrude brick to 24" and thread over vertical rods for lateral support - drystack

---

Notes 11 April 2003

Brick - no longer used in bearing cost - new systems faster and lighter and open [Calvino, Six Memes: Lightness, Quickness...]

- Should be used clearer, as an indigenous material and classically associated with breweries
- Expressive of change in beer over time, refined and lighter

Weathering imparted onto brick wall is significant. North facing, this wall will begin to acquire moss and water that will not undermine the integrity of a typical masonry wall - rainscreen - filter.

Materials Palette
+ Expressed steel (fire)
+ Stone (earth) [fire?]
+ Copper (fire)
+ Brick (earth)
+ Glass (fire/water)
+ Vines - trellis panels of wood (earth/air?)
