Adults=Perceptions of the Long-Term Effects
of Participation in High School Sports

Susan S. Bechtol

Dissertation submitted to the Faculty of the
Virginia Polytechnic Institute and State University
in partial fulfillment of the requirements for the degree of

Doctor of Philosophy
in
Educational Leadership and Policy Studies

Keywords: Sports, Student participation, High school, Adults, Physical activity,
Fortune 500, Athletics, Long-term effects
The long-term effects of participation in high school sports were the focus of this study. Ten top-level managers in Fortune 500 companies were asked about participation in high school sports and the enduring effects of that participation.

Five men (one black) and five women (one Asian) participated in the study. Interviewing, observing offices, and reviewing high school yearbooks were the methods of data collection. The data were analyzed using the constant-comparative method of Maykut and Morehouse (1994).

Based on the literature and the development of a sports participation theory, data were collected on the organizational and personal variables affecting participation in high school sports, and the sports participation variables affecting later life.

Long-term effects of sports participation in high school were identified in 13 areas: (1) being competitive, (2) being goal oriented, (3) being physically active, (4) making friends, (5) developing leadership skills, (6) enhancing self-esteem, (7) displaying sports paraphernalia, (8) practicing sports philosophy, (9) working as a team, (10) acquiring skills not taught in a classroom, (11) managing time, (12) volunteering, and (13) working with diverse groups. These findings may be helpful to school administrators and policy makers as they evaluate the benefits and liabilities of their sports programs.
ACKNOWLEDGMENTS

I want to acknowledge my advisor Dr. David Parks, without whom I would never have completed this project. I want to thank him for sticking beside me when the going got tough and for his trademark encouraging feedback.

I would also like to thank my committee members: Dr. Tina Dawson, for providing much guidance in the early stages of developing this study; Dr. Bill Christy, who was always willing to discuss the benefits of sports participation and the need for my research; Dr. Travis Twiford, who came on as a committee member with recent experience as president of the high school league association in North Carolina; and Dr. Vicki Swecker, who encouraged me to provide research that would be beneficial to central office personnel. They each offered words of wisdom when I needed them the most.

I would like to publicly thank the school board members and central administration personnel of the Portsmouth Public Schools for allowing me to take a year to move to Blacksburg and complete this project.

There are two special persons in the Educational Leadership and Policy Studies program at Virginia Tech that deserve a very special thank you. Paulette Gardner has listened to my problems for five years. She has never been negative and always offered to assist. Without Paulette, this project would never have been finished. Paulette, thank you again for everything. The second person is Dr. Terry Wiita. Words will not do justice to all that she has done for me during my residence in Blacksburg. You just don’t know the importance you have played in my life. Thank you does not seem strong enough, but thanks for everything.

During the final stages of development of this report, a dear friend emerged as a willing assistant to read and talk statistics with me. I want to thank Keith Harris for his willingness to help me prepare for the big “D” day and for his help with the rewrites.

I must thank the executives from the Fortune 500 companies for their honest, sincere, emotional responses to the questions used for this study. This project took time away from your jobs and in some cases brought back memories long forgotten. You made producing this report interesting and rewarding, and I deeply appreciate your assistance.

Along the path there have been many friends and family who assisted me in segments of this project. I would like to thank Jim Durham, Stuart Vaughn, Kathy Saunders, Cathy Bierly,
Angie Ballestino, Tony Maturo, Yolanda Hilton, and Billy King for their valuable assistance in finding subjects for this study.

A very special thank you goes to Nancy Maturo whose comment “I used to be a clerk stenographer” got her into a huge role with this project.

I would like to recognize my 1996 Tidewater cohort and thank them for the camaraderie over the past five years. Dr. Robert (Bob) Richards, who recruited me for this program, has retired, but his words of encouragement and thoughts on progressing a little at a time have remained in my thoughts. Our cohort has been eating an elephant one bite at a time.

A special thanks goes to my parents, Peggy and James Durham. They were always encouraging and called me frequently that last year to see how I was progressing and if I was ok. Their words of encouragement and constant “hang in there” provided me the assurance that I could complete this project. They believe in education and taught that belief to me. Thanks, Mom and Jim.

Finally, I must express the gratitude and pride I have for my husband, who never doubted for one minute his “Sunshine” could complete this project. His motto ‘Just do it!’ is still the screen saver on my computer. I would not have been able to complete this project if he had not been willing to make huge sacrifices. I love you and thank you, Marty.
DEDICATION

This project is dedicated to all the high school athletes who have touched my heart for the past twenty years. There are too many of you to name. It is hoped that you learned something from your experiences as a high school athlete that has endured. Perhaps, you learned at least one thing from high school sports participation that has carried over to your adult life. This project would never have been conceived had it not been for the daily encounters of watching you practice, mature, and compete. A very heartfelt thanks goes out to each of you. Thanks for the motivation to “just do it,” and thanks for the memories.
