Dr. John Hillison
Committee Chairperson

ABSTRACT

This study examined the factors that influence minorities to enroll in agricultural science programs at Virginia Tech. Minorities have been and continue to be underrepresented in most areas of the agricultural sciences. The presence of African-American and other minority students in the agricultural sciences is, therefore, very important. Enrollment numbers in programs across the country indicate that agriculture, does not appeal to many minority groups. Wardlow, Graham, & Scott (1995) noted that there is little doubt that minorities are underrepresented in academic departments at land-grant universities, professional roles in agricultural industries, and in governmental agencies such as the United States Department of Agriculture (USDA).

The data collection in this study was through a survey developed by the researcher. The population in this study consisted of minority undergraduate and graduate students in the Minority Academic Opportunities Program (MAOP) and Minorities in Agriculture, Natural Resources, and Related Sciences (MANRRS) organization at Virginia Tech.

The respondents in this study selected agricultural science as a major due to their personal decision, input from family members and friends, and the guidance from a high
school or faculty member. They also noted there was opportunity for them in the
agricultural sciences and felt that professors, administrators and students within the
department were fair and supportive. Financial assistance was an important factor in the
student’s decision enrolling in the program, and the majority of the respondents were
receiving financial assistance. However, the respondents noted that they would be
enrolled if they were not receiving financial assistance and felt they had the opportunity
to succeed in the agricultural sciences at Virginia Tech
ACKNOWLEDGMENTS

I am very thankful to my Heavenly Father for granting me the strength to write this dissertation and complete this graduate program. I would like to thank my parents, Mr. & Mrs. Raymond E. Lynch, for their love, support, and words of encouragement.

A very special thanks is extended to Dr. John Hillison for chairing this committee and agreeing to serve as my advisor. In addition, I cannot forget my committee; Dr. Bill Camp, Dr. Carey Ford, Dr. Daisy Stewart, and Dr. Josiah Tlou, for the interest they have shown in the continuing of my education and the contributions they have made that have enabled me to become a stronger individual. The time, patience, and teachings that they have shown and given me will enable me to pursue a higher level in the field of education. I was fortunate to have had a supportive committee guide me during my tenure at Virginia Tech.

I would like to thank Dr. Randolph Grayson, Dr. Larry Moore, and the minority students at Virginia Tech for their help in the collection of data to make this study possible. Without their contributions, this study would not be possible.

I especially want to thank Crystal Taylor and Claretha Banks, two of my very special friends and members of my cohort who were always there to remind me that I had work to do and a dissertation to finish. I am very thankful to have had their support and enjoyed having the opportunity of working with them.

Lastly, I would like to thank Pastor Barrett and the members of the First Baptist Church for their encouragement, prayers, and words of wisdom. In addition, the Voices of Expression (VOE) were my support during troubled times. We praised the Lord during my troubled times through song, and I want to take this opportunity to say thank you!
DEDICATION

I dedicate this dissertation to the Lynch and Jackson families along with former friends, teachers, neighbors, and members of my church. I thank each of them for their words of encouragement, and prayers throughout my tenure in school.
