Questionnaire 1: Local government officials and planning officials

- What are the main patterns of current and past industrial property ownership in Dongguan? How have they changed from 10 and 20 years ago?

- I understand the city has expanded a lot in the past several years, how much does it have to do with foreign investment?

- What is the change in air and water quality in Dongguan when it changed from a predominantly rural city to an industrialized area?

- What are your requirements for the foreign investors to maintain a pleasant environment for the local residents? Are they any different from the requirements for domestic investors?

Questionnaire 2: Foreign investors, some of whom may work through local investors

- How long have you been in business in China? Why did you select this particular site for your company/factory to locate?
• Was the local environment a primary factor that you considered when you built your company (and its branches)?

• Did you submit an environmental evaluation report before you opened your factory? Who did you work with on the report?

• Has the government given you support in giving you guidance and helping you solving environmental protection problems?

**Questionnaire 3: Researchers in Zhongshan University (Guangzhou)**

• What are the main patterns of current and past industrial property ownership in the Pearl River Delta region?

• What is the difference in reaction to environmental issues of different owners? Is the reaction different from now to 10 or 20 years ago?

• What environmental changes have occurred in connection with the ownership changes? Are foreign investors more active in the environmental protection issue, i.e., are they more willing to understand the impact their factories may have to the local environment?

• What are the changes you have noticed in local income patterns? Does it have to do with the foreign investment locations?

• What changes have occurred in terms of foreign investment patterns? Are there many foreign investments seeking collaboration with researchers in the environmental field in the Pearl River Delta?
