Optimal Evacuation Plans for Network Flows over Time Considering Congestion

Edward Pye Chamberlayne

Dissertation submitted to the Faculty of the Virginia Polytechnic Institute and State University in partial fulfillment of the requirements for the degree of

Doctor of Philosophy in Industrial and Systems Engineering

Douglas R. Bish, Chair
C. Patrick Koelling
Hesham A. Rakha
Hanif D. Sherali

June 9, 2011 Blacksburg, Virginia

Keywords: network flows, optimization, microscopic traffic simulation, INTEGRATION, congestion, evacuation planning, capacity drop

I would like to include a figure that originally appeared in "EVACUATION MANAGEMENT OPERATIONS (EMO) MODELING ASSESSMENT: TRANSPORTATION MODELING INVENTORY" (October 2007) within my dissertation. Specifically, it is Figure 8: Evacuation Modeling Spectrum. I will, of course, reference the original document when including the figure.
