A path of travel

A geometry of construction
Study Model
Study Model
Site

a location of symbolism and reverence
The site is at the southwest end of the national mall near the Lincoln Memorial. To the East and West are the Korean memorial and the District of Columbia’s World War memorial. The southern limits of the site are defined by Independence Avenue, which runs along the southern side of the property. The Northern boundary is established by the southern walkway that runs between the Lincoln Memorial and the U.S. Capital building. Opposite the walkway at the North and Independence Avenue to the South are the United States national polo fields. A path connecting the primary fields at the South to those at the North runs along the eastern end of the site.
