HOW ONE MIDDLE SCHOOL BEGAN TO MAP INSTRUCTION
AN ACTION RESEARCH JOURNEY

(ABSTRACT)

This study documented the initial planning process of a group of sixth grade teachers on a collaborative team in a mid-sized school division of 19,000 students over a six-month period. Using action research, this team of teachers examined their own practices of planning and implementing instruction. The teachers identified a focus area, planned for instruction, implemented the plan, observed the results of their plan, reflected upon the results and revised the plan (Kemmis and Wilkinson, 1998) to map their instruction. The teachers used archival, conventional and inventive information sources (Calhoun, 1994) to collect their data on the identified focus areas. The teachers used the concept of curriculum mapping (Jacobs, 1997) to plan instruction for their assigned students.

The researcher originally had planned to assume three roles in the study: a coach or facilitator, a participant and a participant-observer, however as the study progressed the researcher also assumed the role of a member/learner (Mertens, 1998) in the process.

Classroom observations, transcribed audio-tapes of planning meetings, field notes, teacher lesson plans, the team’s reflection journal, teacher biographical information, interviews and visual curriculum maps designed by the teachers provided data for the study.

Emergent themes in teacher planning included instructional design, student personal information and parent communication. The themes were defined by the supporting actions of the teachers. Instructional design was defined in the study with mapping, curriculum and instructional strategies. Student personal information encompassed personal learning styles, information regarding student feelings and behaviors and instructional strategies specifically identified for individual students. Parent communication included school, classroom and student information shared with parents.

The research questions explored were: How does the planning process take place? How did the planning process change as the team worked through the action research process? The findings show that: (1) a team of teachers can become stronger when they articulate their plan for instruction in writing (or in this case, drawing). (2) The concept of curriculum mapping can be a vehicle to insure a systematic instructional planning process. (3) Teachers detail individual assessment and instruction in planning sessions, lesson plans or curriculum maps. (4) Action research can provide a means for teachers to examine their own practices in a non-threatening format when they identify the focus areas of examination. (5) Teachers can learn from each other and share learned information in team planning if they perceive shared beliefs. (6) Teachers can plan for the
success of all students when they consider essential questions to be learned and individual learning styles of their students. (7) Teachers and administrators can work collaboratively in examining planning and instructional practices. (8) Teachers can identify their own professional growth needs when they examine their own practices. The findings also indicated that these middle school teachers created their own visual description of their planning for instruction, bringing ownership and empowerment to the process.

The implication of these research results is that teacher planning in a team can be a powerful force in the improvement of instruction influencing the design of an instructional plan, the implementation of the plan and teacher reflection on the results of the plan in student learning and success within the classroom. Recommendations for future research are discussed.
ACKNOWLEDGEMENTS

I would like to thank my committee, especially Dr. Stephen Parson who wouldn’t give up on me. His mentorship has been invaluable to me. Thank you Dr. Parson for finding this lost sheep.

Dr. Christina Dawson encouraged me and challenged me with questions that helped me focus on a topic that meant something to me. Her friendship and support helped me get through the tenuous times.

Dr. Pat Kelly supported and guided me with the committee into an action research study. She listened intently when I wanted to share my excitement as the study progressed.

Dr. Claire Vaught accepted the challenge to work with me and to lend her expertise whenever it was needed. Her viewpoint often grounded me and allowed me to see things through a different lens.

Dr. Jerry Niles’s firm commitment to excellence in education guided me. His direction and support are appreciated.

I would also like to thank some very special people who supported me in this endeavor.

Dr. Russell Watson, whose support and encouragement helped me see the importance of completing my studies. Your demonstration of excellence is inspiring.

Dr. Nancy DeVries Guth, your friendship is golden to me. We planted the seed of camaraderie at Fred Lynn, watered it over the years and can be proud of the rose our connection has become.

Celia White whose editing helped me see the light—the commas and sentence fragments when I was lost in the text.

SueEllen Musselman whose transcribing and assistance gave me an organized set of data to mine.

Mike Ballard whose technological knowledge helped me when I most needed it.

Pete Vernimb whose initiative kept our heads above water.

To Sue Clark, Wendell Latham and Scott Walker who supported me and encouraged me.

To all of my professional friends who supported me throughout the project.
DEDICATION

I want to thank my family.

Joe, my husband who told me not only that I could finish the study, but convinced me that I would make a difference. I’m glad you recognized the possibilities of our relationship early in our lives. Thank you for encouraging me to touch those stars. I enjoy you. You are my soulmate and my best friend.

Andrew, thank you for understanding that mom had a project to finish—Let’s go to the beach!

Jess, thank you for making me believe in myself. Thanks for being the parent in our relationship when I needed you to be. Your understanding and undaunting support has been my encouragement. You are my idol.

Jody, my sister, whose relentless encouragement and direction guided me through the project. Thanks for substituting as a mom for the kids when we needed you. And especially thanks for always finding the “good” in every disappointment I faced. Your outlook is contagious. You are my anchor.

Mom, who with dad, instilled in me the desire to always reach for the golden ring and helped to develop the perseverance to keep reaching until I was able to capture it. Your are my beacon.

Teena, my sister who has taught me how to be a survivor. I relish the simple things of life because of you. Thank you.
