Contents

Abstract ii
Acknowledgements iii
List of Symbols iv
List of Figures x
List of Tables xi
1 Introduction 1
  1.1 Motivation 1
  1.2 Methodology 1
  1.3 Overview of Problem Formulation Issues 3
2 Formulation of the Model for Optimization 5
  2.1 Summary of the Weight Module 5
  2.2 Summary of the Cost Module 11
  2.3 Measures of Merit 18
  2.4 Constraints on the Design 18
3 The Cargo Module 21
  3.1 Overview 21
  3.2 TEUs below Deck 21
  3.3 TEUs above Deck 25
  3.4 Center of Gravity of Containers 28
  3.5 Multiple Regression Analysis 30
  3.6 Evaluating the Goodness of a Fit 31
4 Overview of the Optimization Process 33
  4.1 Summary of the Interface 33
  4.2 Overview of Hull Geometry Manipulation 36
4.3 The Optimization Process and DOT

5 A Discussion on the Results of the Optimization Process
5.1 Results of the Optimization Process
5.2 Iteration History
5.3 Sensitivity Analysis
5.4 Breakdown of Weights and Costs

6 Effect of Key Parameters on Design
6.1 Port Waiting Time
6.2 Loading and Unloading Rate
6.3 Number of Tiers on Deck
6.4 Comparison of RFR and ROI as Objective Functions

7 Effect of Basis Hull Form on Design
7.1 Basis Hull Forms
7.2 Use of Different Hull Forms in Design
7.3 Conclusions

8 Detection of Numerical Errors
8.1 Alpha Plots
8.2 Elimination of Numerical Errors

9 Conclusions and Suggestions
9.1 Conclusions
9.2 Suggestions for Future Work
