List of Tables

2.1 Validation of the weight module and comparison of the original and new expressions for the lightship weight 9
3.1 Data on ships used in cargo module 24
3.2 Number of tiers on deck as a function of beam 27
3.3 Moment-arm factor of TEUs below deck as a function of Cb 28
3.4 Sample correlation coefficient and RMSE for the fits 32
4.1 Importance of objective function scaling 36
5.1 Bounds on the design variables 42
5.2 Results of optimization 43
6.1 Effect of port waiting time on design 52
6.2 Effect of loading and unloading rate on design 53
6.3 Effect of number of tiers on deck on design 54
6.4 Comparison of RFR and ROI as objective functions 55
7.1 Basis ship information 56
7.2 Use of different hull forms on design 57
7.3 Hydrostatic properties of resultant hull forms 59
8.1 Results indicating non-convergence 61
8.2 Comparison of parameters at points 6 and 7 from Figure 8.1 62
