Acknowledgements

First and foremost, I would like to thank my advisor, Dr. A. Lynn Abbott, for his immeasurable guidance, patience, and support throughout the course of my Ph.D. program. I have learned much as a direct result of working with him. Similarly, my committee member Dr. Richard W. Conners has contributed much to my Ph.D. study. His confidence in my capability has enabled much of my creative work, for which he receives my sincere appreciation. I would also like to thank Dr. Hugh F. VanLandingham, Dr. D. Earl Kline, Dr. William T. Baumann, and Dr. John S. Bay for their helpful advice and for being on my committee.

This research could not have been accomplished without the financial and technical support from Federal Aviation Administration and Bradley Department of Electrical and Computer Engineering of Virginia Polytechnic Institute and State University. Warm thanks go to Yuhua Cui, Dr. Qiang Lu, Dr. Thomas H. Drayer, Paul LaCasse, Hongliang Wu, Panos J. Arvanitis, and all people who have worked with me on the project at the Spatial Data Analysis Laboratory. I would like to thank all my friends in Blacksburg, VA, for their friendship and support during my Ph.D. studies.

I would also like to thank my wife Xiaojun Qin and my children Joey and Jessie, for their support and patience during my Ph.D. studies. Life is always good whenever I am with them. Special thanks to my parents Zhaolai Shi and Qiaobian Duan for their high standard on my academic career and strict discipline on my early education. My father, who passed away almost twenty years ago, still has deep influence in every aspect of my life.
