STYLE OVER SUBSTANCE? THE EFFECT OF PERCEPTIONS OF THE ECONOMY AND AFFECT TOWARD THE PRESIDENT ON TRUST IN GOVERNMENT

by

Adam Jeremy Holmes

ABSTRACT

This study examines persons’ trust in the federal government using data from the National Election Study for the presidential election years 1980 through 2000. I hypothesize that person’s perceptions of the national economy’s health and their affect toward the incumbent president are both positively correlated with their trust in the federal government. I also hypothesize that a persons’ level of affect toward the president is a stronger predictor of their trust in the federal government than persons’ perceptions of the national economy’s health. All of these hypotheses are supported in my findings. I also present a serendipitous finding that relates to political party culture. This study finds significant differences between Democrats and Republicans in the trust they afford the government via affect toward the president, suggesting a difference in how self-identified Democrats and Republicans view the president’s role in government.
# TABLE OF CONTENTS

## CHAPTER 1: INTRODUCTION

1.1 Trust in American Government..............................................................1

1.2 Presidential Campaigns and Elections..................................................2

## CHAPTER 2: LITERATURE REVIEW

2.1 Trust, Legitimacy, and Democracy..........................................................4

2.2 Legitimation Crisis....................................................................................6

2.3 Who Is Trusted?.......................................................................................7

2.4 Why Do We Trust?..................................................................................10
