Figure 3 - Electrophoretic gel of sarcoplasmic proteins from bovine *Biceps femoris* muscle treated with 0 grams (C), 105 grams (H1), 200 grams (H2), and 305 grams (H3). RS was a reference standard used to determine individual proteins.
Figure 4 - Electrophoretic gel of myofibrillar proteins from bovine *Biceps femoris* muscle treated with 0 grams (C), 105 grams (H1), 200 grams (H2), and 305 grams (H3). RS was a reference standard used to determine individual proteins.
