Table of Contents

Introduction

Genetically modified plants 1
Producing genetically modified plants 2
  Non-targeted methods 2
  Targeted methods 4
Goals of this project 5
Biology of adeno-associated virus 5
  Viral vectors for gene therapy 5
  AAV-2 structure and genome organization 5
AAV-2 life cycle 8
Rep78/68 9
AAV-2 applications 12
AAV-2 gene therapy technology to transform plants 13

Materials and Methods 14

Reagents 14
DNA fractionation 14
rep78 plant vector construction 14
Competent bacteria preparation 18
Bacterial transformation 18
Bacterial clone analysis 18
Sequence analysis 20
Infiltration medium 21
A. thaliana vacuum infiltration 21
Plant selection/Genomic DNA extraction 22
HeLa cell infection 24
SDS-PAGE and Western blotting 25
PCR analysis of transformed plants 27
RT-PCR analysis of transformed plants 28

Results and Discussion 30

rep78 plant vector construction 30
rep78 in A. thaliana 35
rep78 sequence in A. thaliana 40
Rep78 expression in A. thaliana 40
  rep transcription 40
  Rep translation 45
Rep78 expression in vitro 47
Conclusions 49
Future directions 52
List of Tables

Table I. Cycling conditions for amplification of rep78 15
Table II. Cycling conditions for amplification of ~300 bp rep78 fragment 19
Table III. Cycling conditions for amplification of ~1900 bp rep78/GFP fragment 20
Table IV. Cycling conditions for sequencing of rep78 from pSdDan and transgenic plants 21
Table V. Primer annealing temperatures 24
Table VI. Cycling conditions for amplification of rep78 fragments and GFP from transformed plants 28
Table VII. Cycling conditions for RT-PCR amplification of rep fragments and GFP from transformed plants 29
List of Figures

Figure 1. AAV-2 transcription map (adapted from Redmann et al., 1989) 7

Figure 2. Integration of AAV-2 into AAVS1 (taken from Yoon et al., 2001) 10

Figure 3. Rep78/68 functional domain map (adapted from Gavin et al., 1999) 11

Figure 4. pSdDan 17

Figure 5. Locations of Rep and GFP primers within pSdDan 23

Figure 6. Amplification of rep78 from pSUB-201 32

Figure 7. Amplification of rep78 (lanes 2-4) and rep78-GFP (lanes 5-6) fragments 34

Figure 8. Amplification of rep78 fragments from transgenic plant #2 36

Figure 9. Amplification of GFP fragment from transformed plant #2 38

Figure 10. Chlorotic lesions as observed in the older leaves of the transformed plant #2 T1 generation 39

Figure 11. Alignment of rep78 (930 to 973 bp shown) and plant #2 sequence data 40

Figure 12. rep RT-PCR from transgenic plant #11 42

Figure 13. GFP RT-PCR from transgenic plant #11 43

Figure 14. rep and GFP PCR from transgenic plant RNA and positive templates 44

Figure 15. Western blot of rep/GFP transformed plants 46

Figure 16. Western blot of AAV-2 and Ad-5 infected HeLa cell lysate 48
