OPTIMIZED HARMONIC STEPPED-WAVEFORM FOR MULTILEVEL INVERTER

Siriroj Sirisukprasert

(ABSTRACT)

The concept of multilevel voltage source inverters and their modulation topologies are described. The concept of the Optimized Harmonic Stepped-Waveform (OHSW) technique for a multilevel inverter is presented. By applying this concept, specific harmonics can be eliminated, and the output voltage THD can be improved. A procedure to achieve the appropriate switching angles of the OHSW is proposed. Experimental results are presented to verify the concept. The proposed OHSW technique is implemented on a multilevel inverter using cascaded-inverter with separated dc sources. Comparison between the Selective Harmonic Eliminated PWM and the OHSW is also presented.
ACKNOWLEDGEMENTS

The main credits for the completion go to my academic advisor, Dr. Jason Lai who provided me generously guidance, patience, and support during my course-work and thesis stages.

My sincere thanks go to my two advisory committees, Dr. Dusan Borojevic and Dr. Alex Q. Huang. Dr. Borojevic was very kind to serve me as the interim advisor and to advice me at the very beginning of my study at Virginia Tech. Dr. Alex also gave me very helpful suggestions and introduced me to power electronics area.

I would like to thank the laboratory manager of Center for Power Electronics System (CPES), Mr. Joe Price-O'Brien, who supported me all equipment and instrument involving in my thesis. I would also like to thank all of my friends, who gave me ideas and suggestions to complete my thesis.

Finally, but most importantly, I would like to thank my beloved family members, who always give me strong inspirations, moral supports, and helpful suggestions. Without them, my study career would never have begun.
