Framing Impressions: Image, Drawing, and Collage
Rehanna B. Rojiani

Abstract
The architectural image acts towards two primary objectives; to represent what is there and to make present what is not. This differentiation between the two constitutes a frame in which what is not present can appear. Images considered as such allow for the exploration of the formal questions of place, questions that address both longing and belonging and one’s belief that something can and should take place. Through photography, drawing, and collage, the project considers the nature of a room with a view in relation to the house and the field.
Acknowledgements

To my committee,
   for always addressing this pursuit with thoughtfulness;

To Steve,
   for patience, opposition, and acting with intention;

To Frank,
   for comedy, compassion, and belief in potential;

To Shelley,
   for keen eyes, enthusiasm, and encouragement;

To Kay,
   for introducing me to the origin of this project;

To family, friends, and colleagues,
   for your help and support in too many instances to list -
   without which this would not be as it is;

   thank you.

Impressions

The impression of a place is only an image of the actual place. As the place itself changes over time, the memory of a place and its actuality diverge. The built world begins to appear as a field of remnants and fragments of what once was. These artifacts are physical apparitions that give way to a nostalgia for something that may never have existed at all and for places remembered that one has never seen.
On Drawing

By itself, the perspective is no longer an effective means of proposal as it is too closely related to photography. The drawings that follow use projective and axonometric methods. The premise of an autonomous project is already embedded in these techniques. The projective frame is one of six faces of an idealized box that delineates the project from the outside world. In this way, the drawing tends towards the model, allowing specific variables to be isolated and investigated in relation only to each other. The model is abstracted from its surrounding conditions by the projective framework; an object floating in space.

The bounding box is discerned through negation. A frame within a frame, such as a window within a wall, exposes the limit of the wall while reinforcing its presence. The same is true of the door and the stair.

The Architectural Image

The architectural image acts towards two primary objectives; to represent what is there, and to make present what is not. The ability to differentiate between the two creates a frame in which what is not present can appear. Once the image has been seen, something seems to be missing from what was there. The photograph’s “that has been” is enmeshed with a sense that something has been lost. Longing creates an opening, a place to be taken by that which is only present in the image.

The architectural image operates inductively, directing towards form, by “indicating a tension between inside and outside.” The threshold of the limit rather than its disclosure allows for the formal to manifest. Placing a frame within a frame reveals its extant, but also negates the limit by concealing the interior. Rather, it is only by turning one frame about another, that the relationship between inside and outside begins to appear. Through the turning of multiple frames, the framing construct is exposed as an artifice, but what is captured within and outside the frame begins to come into view - posing a question of place, one simultaneously of longing and belonging and of one's belief something can and should take place.

Form exists when there is a tension between the inside (assumed by acting subject) and the outside (the datum, situation, or state of things in which the subject acts). The formal is the “implicit limit that inevitably exists between action and datum - of action's grasp of the world.”
