Transition from the college classroom to the workplace requires certain job knowledge, skills, and attitudes (KSAs). How and where the New Employee acquires these KSAs is mired in the transition between education and the world-of-work.

This dissertation informs the college-to-work transition process through the experiences of college graduate liberal arts majors and of those responsible for integrating the new employees into the organization. Three new employees and two managers working on information technology products and services in a major corporation were interviewed. A grounded theory approach was used to discover patterns in the data. This method allowed the researcher to inform the complexity of the college-to-work transition process.

The researcher discovered a naturally evolving process dominated by informal learning that new employees used to learn about the culture and the specific job skills need in the corporation. In many ways, the participants had evolved a process similar to the apprenticeship system of the middle ages.
ACKNOWLEDGEMENTS

No dissertation or doctorate can be completed without the dedicated effort and support of many people. I would like to take this opportunity to thank some of them.

I am very grateful for the support and guidance of my advisory committee. Collectively, they encouraged me to expand my horizons with this research; provided wise guidance when I needed it; and gave me room to explore, to make mistakes, and to learn. To Dr. Bert Wiswell, Chair, I thank you for your encouragement and support. Your willingness to stay with me to the end was vital to completing this work. To Dr. Gerry Cline, thank you for the many lessons and insights on research methods and life. To Dr. Jim Price, thanks for believing in me and encouraging me to continue to pursue this goal. To Dr. Ron McKeen, thanks for your lessons on the art and enjoyment of teaching. To Dr. Marcie Boucouvalas, thanks for your support and encouragement. To be continued; I am sure our paths will cross in the future.

The Aristotle Foundation is recognized for a generous grant, but more importantly for listening to my complaints about almost everything as I processed the final months of this work. And thanks especially to Dr. Paul Nelson who taught me about passive voice while reading all of my dissertation and always being ready with excellent advise on surviving the process.

I am especially grateful for good friends and a very understanding and forgiving family. I give special thanks to my friends and associates at the Defense Systems Management College who suffered with me through the years of this doctorate. I most especially acknowledge my fellow middle-age athletes who tolerated my expressions of frustration on the racquetball courts of Ft. Belvoir. Most of all, I thank my wife and children who were behind me throughout this process and with whom I am pleased to share the credit for this accomplishment.
